CONTENTS IN BRIEF

PART 1 What Is Ecology? 1
CHAPTER 1 Introduction to the Science of Ecology 2
CHAPTER 2 Evolution and Ecology 17

PART 2 The Problem of Distribution: Populations 31
CHAPTER 3 Methods for Analyzing Distributions 32
CHAPTER 4 Factors That Limit Distributions: Dispersal 41
CHAPTER 5 Factors That Limit Distributions: Habitat Selection 57
CHAPTER 6 Factors That Limit Distributions: Interrelations with Other Species 71
CHAPTER 7 Factors That Limit Distributions: Temperature, Moisture, and Other Physical-Chemical Factors 86
CHAPTER 8 The Relationship Between Distribution and Abundance 106

PART 3 The Problem of Abundance: Populations 115
CHAPTER 9 Population Parameters 116
CHAPTER 10 Demographic Techniques: Vital Statistics 133
CHAPTER 11 Population Growth 157
CHAPTER 12 Species Interactions: Competition 179
CHAPTER 13 Species Interactions: Predation 206
CHAPTER 14 Species Interactions: Herbivory and Mutualism 235
CHAPTER 15 Species Interactions: Disease and Parasitism 258
CHAPTER 16 Population Regulation 280

PART 1 WHAT IS ECOLOGY? 1

CHAPTER 1 INTRODUCTION TO THE SCIENCE OF ECOLOGY 2
- Definition of Ecology
- History of Ecology
- Basic Problems and Approaches to Ecology
- Levels of Integration
- Methods of Approach to Ecology
- Application of the Scientific Method to Ecology
- Essay 1.1 Science and Values in Ecology
- Box 1.1 Scientific Method: Definitions of Terms
- Essay 1.2 On Ecological Truth
- Key Concepts
- Selected References
- Questions and Problems

CHAPTER 2 EVOLUTION AND ECOLOGY 17
- What Is Evolution?
- Adaptation
- Box 2.1 What Is Fitness?
- Clutch Size in Birds
- Coevolution
- Essay 2.1 Evolution and “Arms Races”
- Units of Selection
- Gametic Selection
- Kin Selection
- Group Selection
- Summary
- Key Concepts
- Selected References
- Questions and Problems
PART 2 THE PROBLEM OF DISTRIBUTION: POPULATIONS 31

CHAPTER 3 METHODS FOR ANALYZING DISTRIBUTIONS 32

- Transplant Experiments 32
- Essay 3.1 Liebig's Law of the Minimum 34
- Physiological Ecology 35
- Adaptation 36
- Summary 38
- Key Concepts 39
- Selected References 39
- Questions and Problems 39

CHAPTER 4 FACTORS THAT LIMIT DISTRIBUTIONS: DISPERSAL 41

- Examples of Dispersal 41
  - Zebra Mussel (Dreissena polymorpbis) 41
  - Gypsy Moth (Lymantria dispar) 42
  - Chestnut Blight (Cryphonectria parasitica) 44
  - California Sea Otter (Enhydra lutris) 45
- The Three Modes of Dispersal 46
- Essay 4.1 Ships, Ballast Water, and Marine Dispersal 47
- Box 4.1 Definition of Terms for Introduced Nonnative Species 50
- Colonization and Extinction 50
- Evolutionary Advantages of Dispersal 53
- Summary 55
- Key Concepts 55
- Selected References 56
- Questions and Problems 56

CHAPTER 5 FACTORS THAT LIMIT DISTRIBUTIONS: HABITAT SELECTION 57

- Behavioral Mechanisms of Habitat Selection 57
- Evolution of Habitat Preferences 65
- A Theory of Habitat Selection 67
- Summary 69
- Key Concepts 69
- Selected References 69
- Questions and Problems 70

CHAPTER 6 FACTORS THAT LIMIT DISTRIBUTIONS: INTERRELATIONS WITH OTHER SPECIES 71

- Predation 71
  - Restriction of Prey by Predators 71
  - Restriction of Predators by Prey 75

(continued)
(Chapter 6, continued)

Disease and Parasitism 77
Allelopathy 78
Competition 80

*Essay 6.1 What is Competition?* 82

Summary 83
Key Concepts 83
Selected References 84
Questions and Problems 84

**CHAPTER 7**   
**FACTORS THAT LIMIT DISTRIBUTIONS: TEMPERATURE, MOISTURE, AND OTHER PHYSICAL-CHEMICAL FACTORS**  86

Climatology 86
Temperature and Moisture as Limiting Factors 88

*Interaction Between Temperature and Moisture* 91

Adaptations to Temperature and Moisture 94

Light as a Limiting Factor 97
Climate Change and Species Distributions 102

Summary 103
Key Concepts 104
Selected References 104
Questions and Problems 104

**CHAPTER 8**   
**THE RELATIONSHIP BETWEEN DISTRIBUTION AND ABUNDANCE**  106

The Spatial Scale of Geographic Ranges 106
Variations in Geographic Range Size 108
Range Size and Abundance 111

Summary 113
Key Concepts 114
Selected References 114
Questions and Problems 114

**PART 3**   
**THE PROBLEM OF ABUNDANCE**  115

**CHAPTER 9**   
**POPULATION PARAMETERS**  116

The Population as a Unit of Study 116

*Box 9.1 Definitions of Population Parameters* 00

Unitary and Modular Organisms 117

Estimation of Population Parameters 119

*Box 9.2 Calculation of Expected Population Density from the Regression Data Given in Table 9.1* 120

Measurements of Absolute Density 120

Indices of Relative Density 125
  Natality 128
  Mortality 128
  Immigration and Emigration 129
Limitations of the Population Approach 130
Composition of Populations 130
Summary 131
Key Concepts 131
Selected References 131
Questions and Problems 132

CHAPTER 10 DEMOGRAPHIC TECHNIQUES: VITAL STATISTICS 133

Life Tables 133
  Box 10.1 Calculation of Per Capita Rates 135
Intrinsic Capacity for Increase in Numbers 138
Essay 10.1 Demographic Projections and Predictions 143
  Box 10.2 Calculation of the Intrinsic Capacity for Increase from Lotka's Characteristic Equation 145
Reproductive Value 145
Age Distributions 146
Evolution of Demographic Traits 149
Summary 154
Key Concepts 154
Selected References 154
Questions and Problems 155

CHAPTER 11 POPULATION GROWTH 157

Mathematical Theory 157
  Growth in Populations with Discrete Generations 157
  Growth in Populations with Overlapping Generations 160
  Box 11.1 What is Little-r and Why Is It So Confusing? 162
Laboratory Tests of the Logistics Theory 163
Field Data on Population Growth 164
Essay 11.1 What Is a "Good" Population Growth Model? 166
  Box 11.2 A Simple Time-Lag Model of Population Growth 168
Time-Lag Models of Population Growth 169
Stochastic Models of Population Growth 169
Population Projection Matrices 173
Summary 176
Key Concepts 176
Selected References 177
Questions and Problems 177
CHAPTER 12  SPECIES INTERACTIONS: COMPETITION  179
Classification of Species Interactions  179
Theories on Competition for Resources  180
Mathematical Model of Lotka and Volterra  180
Tilman’s Model  182
Essay 12.1 What Is a Phase Plane, and What Is an Isocline?  184
Competition in Experimental Laboratory Populations  185
Competition in Natural Populations  190
Evolution of Competitive Ability  199
Theory of r-Selection and K-Selection  199
Grime’s Theory of Plant Strategies  201
Character Displacement  201
Diffuse Competition and Indirect Effects  202
Summary  203
Key Concepts  204
Selected References  204
Questions and Problems  205

CHAPTER 13  SPECIES INTERACTIONS: PREDATION  206
Mathematical Models of Predation  207
Discrete Generations  207
Continuous Generations  209
Laboratory Studies of Predation  212
Field Studies of Predation  216
Essay 13.1 Laboratory Studies and Field Studies  217
Optimal Foraging Theory  225
Evolution of Predator-Prey Systems  228
Warning Coloration  229
Group Living  231
Summary  232
Key Concepts  232
Selected References  232
Questions and Problems  233

CHAPTER 14  SPECIES INTERACTIONS: HERBIVORY AND MUTUALISM  235
Defense Mechanisms in Plants  235
Tannins in Oak Trees  238
Ants and Acacias  239
Spines in a Marine Bryozoan  241
Spines and Thorns in Terrestrial Plants  242
Herbivores on the Serengeti Plains  242
Can Grazing Benefit Plants?  246
Essay 14.1 Herbivory, Economics, and Land Use  247
Dynamics of Herbivore Populations  248
Interactive Grazing: Ungulate Irruptions  248
Noninteractive Grazing: Finch Populations  251
### CHAPTER 15  SPECIES INTERACTIONS: DISEASE AND PARASITISM  258

- Mathematical Models of Host-Disease Interaction  258
  - Compartment Models with Constant Population Size  259
  - Essay 15.1 What Is the Transmission Coefficient ($\beta$), and How Can We Measure It?  261
  - Compartment Models with Variable Population Size  262
- Box 15.1 How Can Determine $R_0$? A Mathematical Excursion  263
- Effects of Disease on Individuals  264
  - Effects on Reproductions  264
  - Effects on Mortality  265
- Effects of Disease on Populations  267
  - Brucellosis in Ungulates  267
  - Rabies in Wildlife  268
  - Myxomatosis in the European Rabbit  272
- Box 15.2 A Simple Rabies Model  273
- Evolution of Host-Parasite Systems  275
- Essay 15.2 What is the Red Queen Hypothesis?  276
- Summary  277
- Key Concepts  278
- Selected References  278
- Questions and Problems  279

### CHAPTER 16  POPULATION REGULATION  280

- A Simple Model of Population Regulation  281
- Historical Views of Population Regulation  282
- Essay 16.1 Definitions in Population Regulation  283
- A Modern Synthesis of Population Regulation  288
- Essay 16.2 Why Is Population Regulation So Controversial?  290
- Two Approaches to Studying Population Dynamics  293
  - Key Factor Analysis  293
  - Experimental Analysis  296
- Plant Population Regulation  297
- Source and Sink Populations  299
- Evolutionary Implications of Population Regulation  300
- Summary  302
- Key Concepts  302
- Selected References  303
- Questions and Problems  303
CHAPTER 17  APPLIED PROBLEMS I: HARVESTING POPULATIONS  305
Logistic Models  307
Dynamic Pool Models  309
Laboratory Studies on Harvesting Theory  316
The Concept of Optimum Yield  318
Case Study: The King Crab Fishery  319
Case Study: The Northern Cod Fishery  321
Case Study: Antarctic Whaling  324
Risk-Aversive Management Strategies  325
Essay 17.1 Principles of Effective Resource Management  326
Box 17.1 What Are the Harvest Strategies for a Fishery?  327
Summary  328
Key Concepts  328
Selected References  328
Questions and Problems  329

CHAPTER 18  APPLIED PROBLEMS II: PEST CONTROL  331
Examples of Biological Control  333
Cottony-Cushion Scale (Icerya purchasi)  333
Prickly Pear (Opuntia spp.)  334
Floating Fern (Salvinia molesta)  336
Theory of Biological Control  337
Genetic Controls of Pests  342
Immuonocontraception  344
Integrated Control  346
Generalizations About Biological Control  349
Risks of Biological Control  351
Summary  352
Key Concepts  353
Selected References  353
Questions and Problems  353

CHAPTER 19  APPLIED PROBLEMS III: CONSERVATION BIOLOGY  355
Small-Population Paradigm  355
Minimum Viable Populations  356
Box 19.1 What Is Effective Population Size?  359
Essay 19.1 Diagnosing a Declining Population  360
The Declining-Population Paradigm  360
Overkill  361
Habitat Destruction and Fragmentation  362
Essay 19.2 Fragmentation of Habitats and Area-Sensitive Species  367
Impacts of Introduced Species  371
Chains of Extinctions  373
Reserve Design and Reserve Selection  373
Box 19.2 Recovery of Petrels After Eradication of Feral Cats on Marion Island, Indian Ocean  374
Box 19.3 An Algorithm for Choosing Reserves for a Taxonomic Group  375
PART 4 DISTRIBUTION AND ABUNDANCE
AT THE COMMUNITY LEVEL 385

CHAPTER 20 THE NATURE OF THE COMMUNITY 386
Dynamic Relations Between Populations 386
Essay 20.1 What Is the Gaia Hypothesis? 388
Community Characteristics 392
Community Boundaries? 392
Distributional Relations of Species in Communities 395
Indicator Species in Communities 398
Box 20.1 Criteria for Indicator Species 399
Summary 400
Key Concepts 401
Selected References 401
Questions and Problems 401

CHAPTER 21 COMMUNITY CHANGE 403
Primary Succession on Mount St. Helens 403
Concepts of Succession 406
A Simple Mathematical Model of Succession 409
Case Studies of Succession 412
Glacial Moraine Succession in Southeastern Alaska 413
Lake Michigan Sand-Dune Succession 416
Abandoned Farmland in North Carolina 419
The Climax State 423
Patch Dynamics 424
Summary 431
Key Concepts 431
Selected References 431
Questions and Problems 432

CHAPTER 22 COMMUNITY ORGANIZATION I: BIODIVERSITY 434
Measurement of Biodiversity 434
Essay 22.1 Biodiversity: A Brief History 436
Some Examples of Diversity Gradients 438

(continued)
Box 22.1 A Simple Model of Latitudinal Gradients in Biodiversity 443
Factors That Might Cause Diversity Gradients 443
  History Factory 444
  Spatial Heterogeneity 445
  Competition 447
  Predation 448
  Climate and Climatic Variability 450
  Productivity 452
  Disturbance 452
Local and Regional Diversity 454
Summary 456
Key Concepts 456
Selected References 457
Questions and Problems 457

CHAPTER 23 COMMUNITY ORGANIZATION II: PREDATION AND COMPETITION IN EQUILIBRIAL COMMUNITIES 459

Box 23.1 Measuring Community Importance 461
Food Chains and Trophic Levels 463
Essay 23.1 Use of Stable Isotopes to Analyze Food Chains 466
Functional Roles and Guilds 469
Keystone Species 471
Dominant Species 474
Essay 23.2 Fishing Down Food Webs 477
Community Stability 477
Restoration Ecology 480
Summary 482
Key Concepts 483
Selected References 483
Questions and Problems 484

CHAPTER 24 COMMUNITY ORGANIZATION III: DISTURBANCE AND NONEQUILIBRIUM COMMUNITIES 485

Patches and Disturbance 485
The Role of Disturbance in Communities 486
  Coral Reef Communities 486
Essay 24.1 Why Are Corals Bleaching? 489
  Rocky Intertidal Communities 491
Theoretical Nonequilibrium Models 492
Conceptual Models of Community Organization 495
Essay 24.2 Biomanipulation of Lakes 499
The Special Case of Island Species 501
Box 24.1 Measuring Immigration and Extinction Rates 507
Multiple Stable States in Communities 508
Summary 509
Key Concepts 510
Selected References 510
Questions and Problems 511
**CHAPTER 25  ECO SYSTEM METABOLISM I: PRIMARY PRODUCTION  513**

Primary Production  515  
Factors That Limit Primary Productivity  517  
   Aquatic Communities  518  
   Marine Communities  518  
   Freshwater Communities  523  
Essay 25.1 Nutrient Ratios and Phytoplankton  526  
   Terrestrial Communities  527  
Box 25.1 Estimating Primary Production from Satellite Data  528  
Essay 25.2 Why Does Primary Production Decline with Age in Trees?  532  
Plant Diversity and Productivity  533  
Summary  534  
Key Concepts  534  
Selected References  535  
Questions and Problems  535

**CHAPTER 26  ECO SYSTEM METABOLISM II: SECONDARY PRODUCTION  537**

Measure of Secondary Production  537  
Box 26.1 Estimating Energy Expenditure with Doubly Labeled Water  540  
Essay 26.1 Thermodynamics and Ecology  543  
Problems in Estimating Secondary Production  544  
Ecological Efficiencies  544  
What Limits Secondary Production?  549  
   Grassland Ecosystems  549  
Essay 26.2 Why Is the World Green?  551  
   Game Ranching in Africa  554  
Sustainable Energy Budgets  556  
Summary  557  
Key Concepts  557  
Selected References  558  
Questions and Problems  558

**CHAPTER 27  ECO SYSTEM METABOLISM III: NUTRIENT CYCLES  560**

Nutrient Pools and Exchanges  560  
Nutrient Cycles in Forests  562  
Box 27.1 Estimating Turnover Time for Nutrients  564  
Efficiency of Nutrient Use  568  
Acid Rain: The Sulfur Cycle  572  
Essay 27.1 Acid Rain and the Sudbury Experience  575  
The Nitrogen Cycle  576  
Summary  580  
Key Concepts  581  
Selected References  581  
Questions and Problems  582

**CHAPTER 28  ECO SYSTEM HEALTH: HUMAN IMPACTS  583**

Human Population Growth  583  
   Current Patterns of Population Growth  584  
(continued)
Box 28.1 How Large Is a Billion Anyway? 585
Carrying Capacity of the Earth 586
Essay 28.1 The Demographic Transition: An Evolutionary Dilemma 587
Box 28.2 How to Calculate an Ecological Footprint 589
The Carbon Cycle 590
Individual Plant Responses to CO$_2$ 593
   Plant Community Responses to CO$_2$ 594
Climate Change 596
Essay 28.2 El Niño and the Southern Oscillation 598
Changes in Land Use 600
Biotic Invasions and Species Ranges 601
Ecosystem Services 603
Box 28.3 How Is Biodiversity Related to Ecosystem Function? 604
Essay 28.3 On Corals and Climate Change 605
Essay 28.4 Economics of Ecosystem Services 606
Summary 606
Key Concepts 607
Selected References 607
Questions and Problems 608

EPILOGUE 609

APPENDIX I A Primer on Population Genetics 610

APPENDIX II Estimation of the Size of the Marked Population in Capture-Recapture Studies 612
